

***Your reliable partner for engineering,
production and sales of
heating elements and heating systems***

Transportation and mobility

Safe, comfortable, reliable – the recipe for success of public transportation

Every day, thousands of commuters and travellers are using public mass transit such as Intercity and EMUS as well as streetcars. Safety and comfort are key success factors in addition to punctuality. We supply rail vehicle manufacturers with smart, customer-oriented solutions tailor-made to their needs.

Setting new standards together

In cooperation with engineers and technicians of domestic and foreign railway manufacturers, we are developing reliable heating systems to ensure the smooth daily operation. Corresponding fire protection certificates are a matter of course and the standards relating to vibration and shock load.

Reach your destination promptly and safely

Rain, ice and snow interfere with the smooth traffic of rail vehicles. High public traffic frequencies require safe and smart solutions. We manufacture clever heating systems to help our customers, i.e. railway suppliers, manufacturers and operators, reach their destinations.

Solutions that save time and money

High operational demands involving state of the art transportation companies require high flexibility in the automatic combination of vehicle units; a manual procedure is unimaginable these days. Modern heating systems make this procedure possible.

Services

A reliable business partner

SAJA AG was founded in 2024. The marketing, sales and production divisions are located in Tagelswangen, only a 20 minute drive from Zurich airport. SAJA AG is a reliable partner and global supplier for the planning, manufacture and worldwide delivery of heating elements and heating systems for domestic, industrial and railroad applications. Thanks to our in-house production, we can support our customers and manufacture customized products or series at short notice.

Consulting

We constantly strive to find the ideal solution. Our motto is: highest benefits for our clients. Our experts are always here to lend a helping hand with your projects.

Engineering

We will analyze your problem, evaluate a suitable product and develop one or more proposals including pricing in cooperation with you. With regard to heating systems, the results cannot always be calculated conclusively. That's why we like to build a prototype first. This minimizes your risk and prevents high tool costs.

Outsourcing

SAJA AG takes over all operational, strategic and anticipated management tasks associated with your heating requirements. Targeted outsourcing helps you to increase cost advantages and your productivity in the core business.

Product portfolio

Heating elements

- Band heaters
- Cartridges
- Heating cables
- Heating foils
- Micro tubulars
- Open wires heaters
- Thick film heaters
- Tubulars

Heating systems

- AUX heaters
- Boilers
- Cab heaters
- Convector heaters
- Fan heaters
- Heated and unheated floor systems
- HVAC Heaters
- Side wall heaters
- Thresholds
